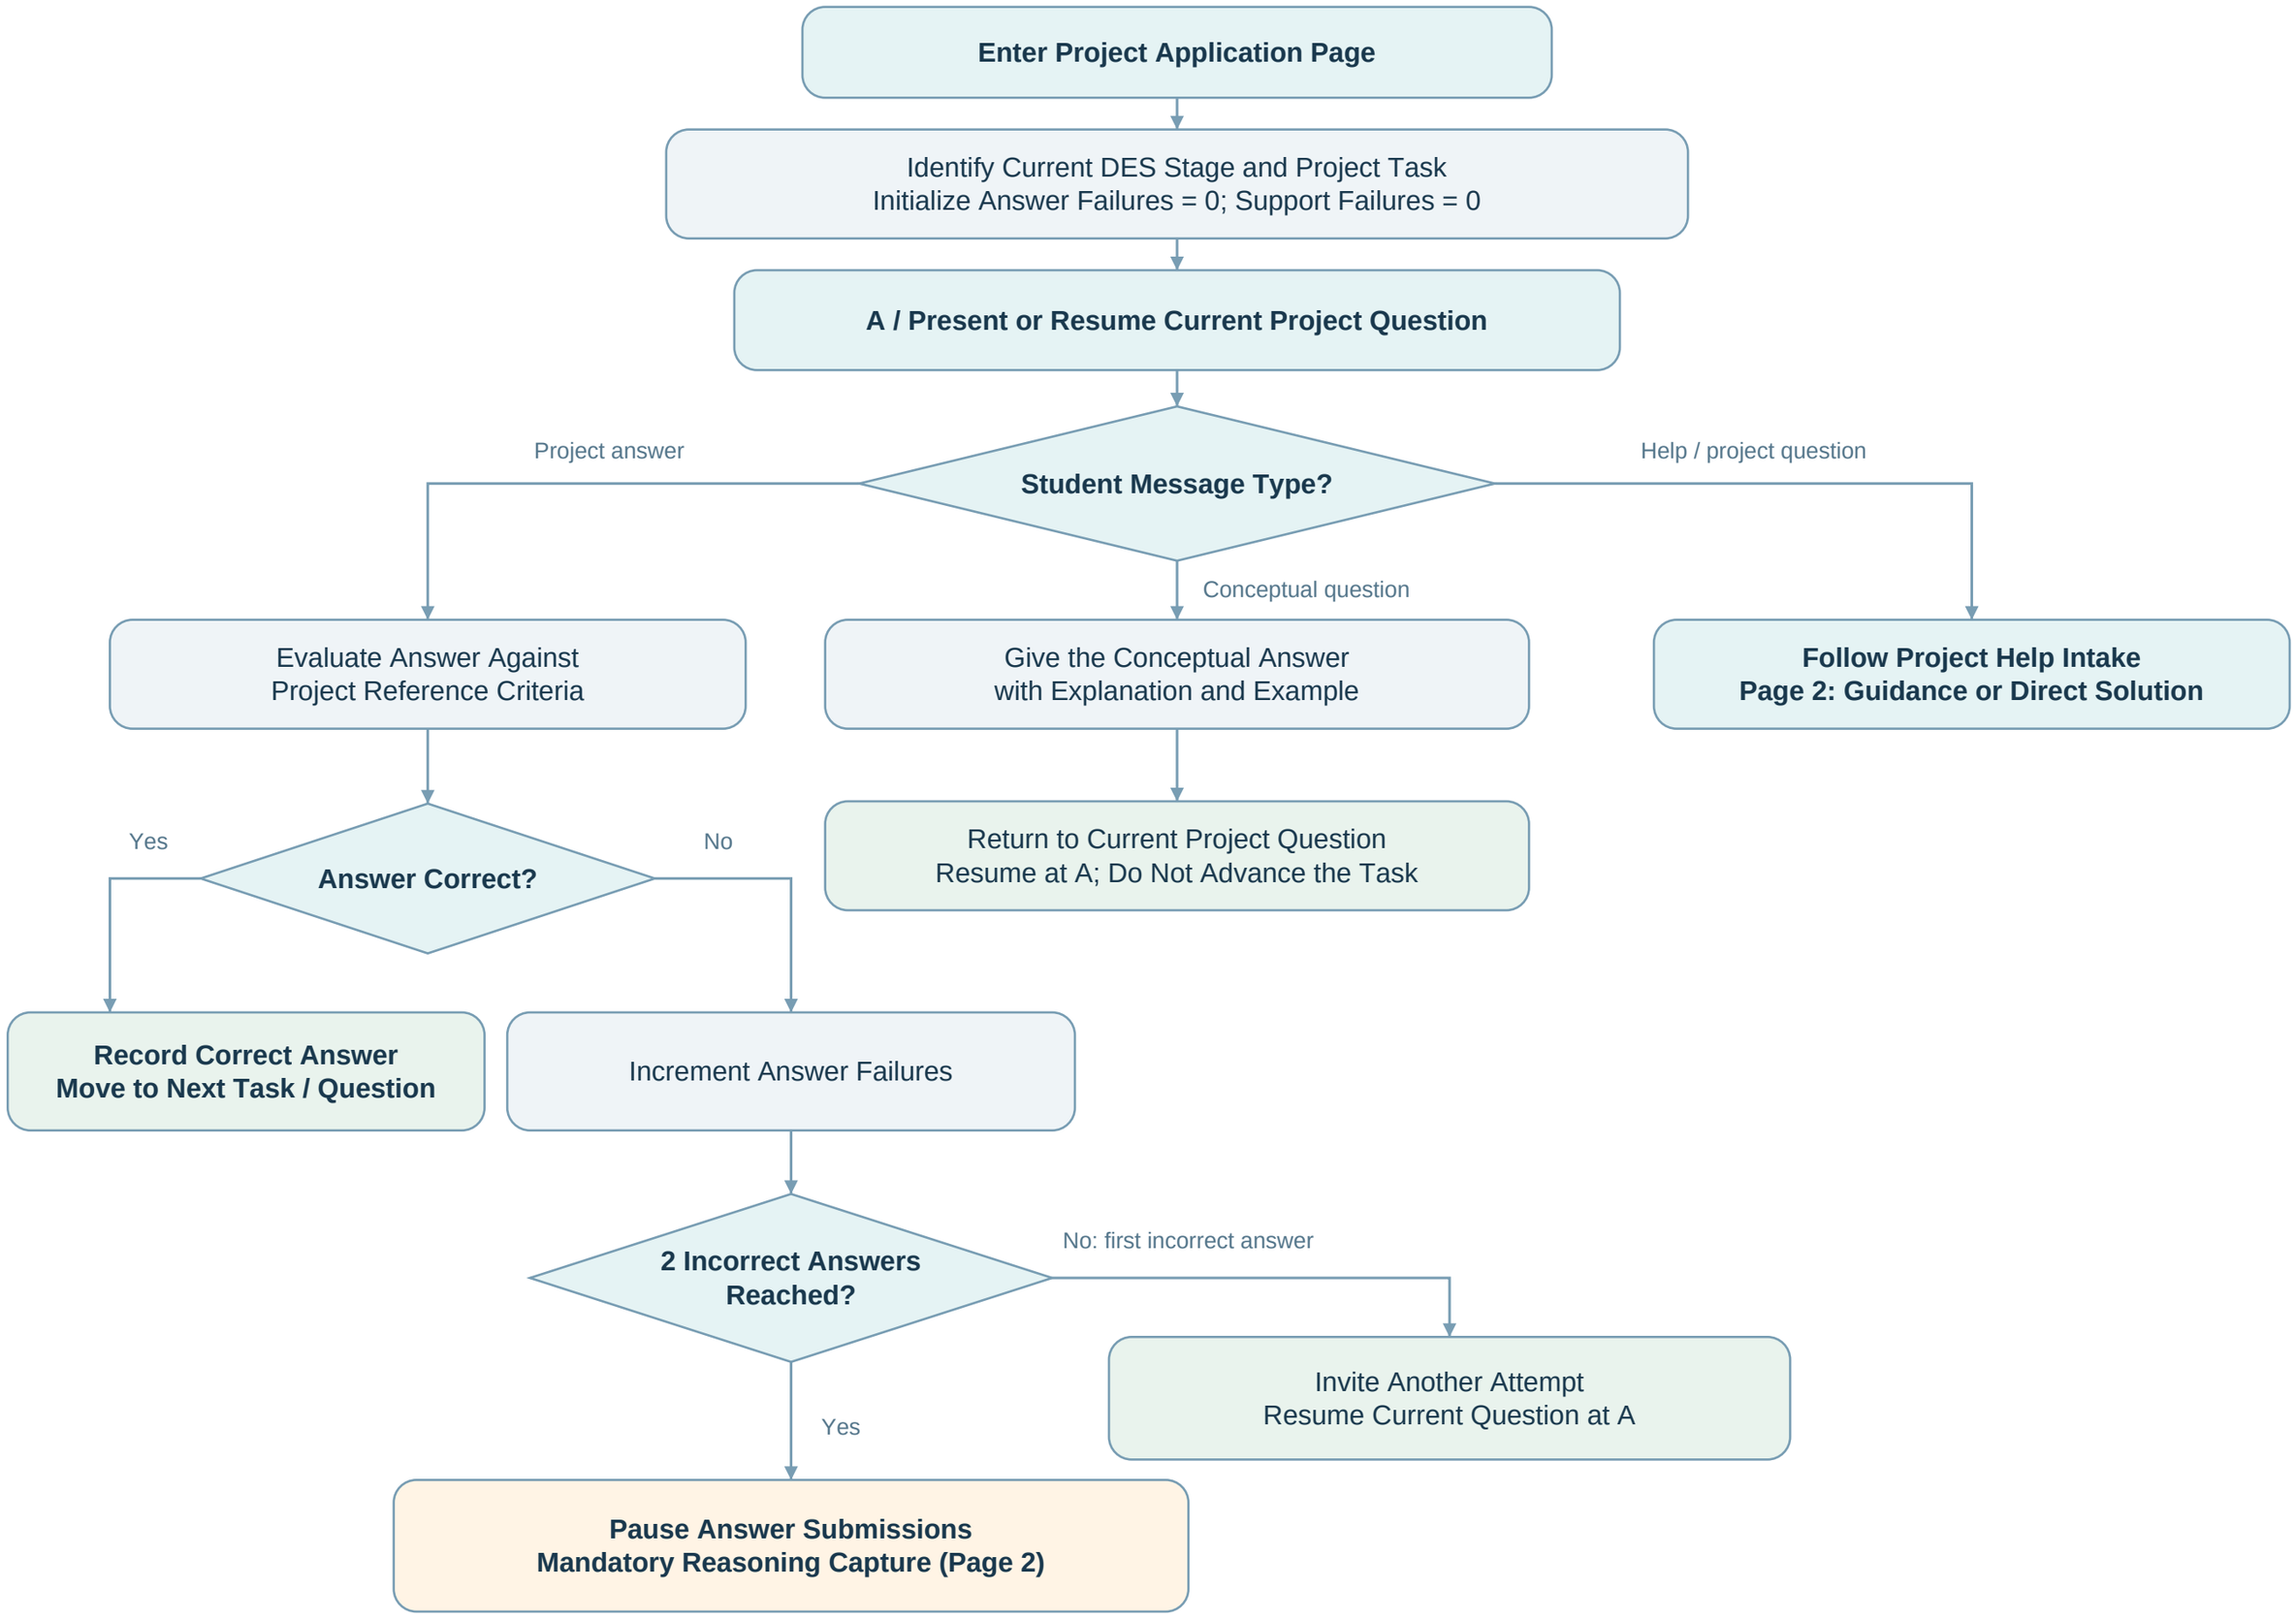
Pedagogical Policy

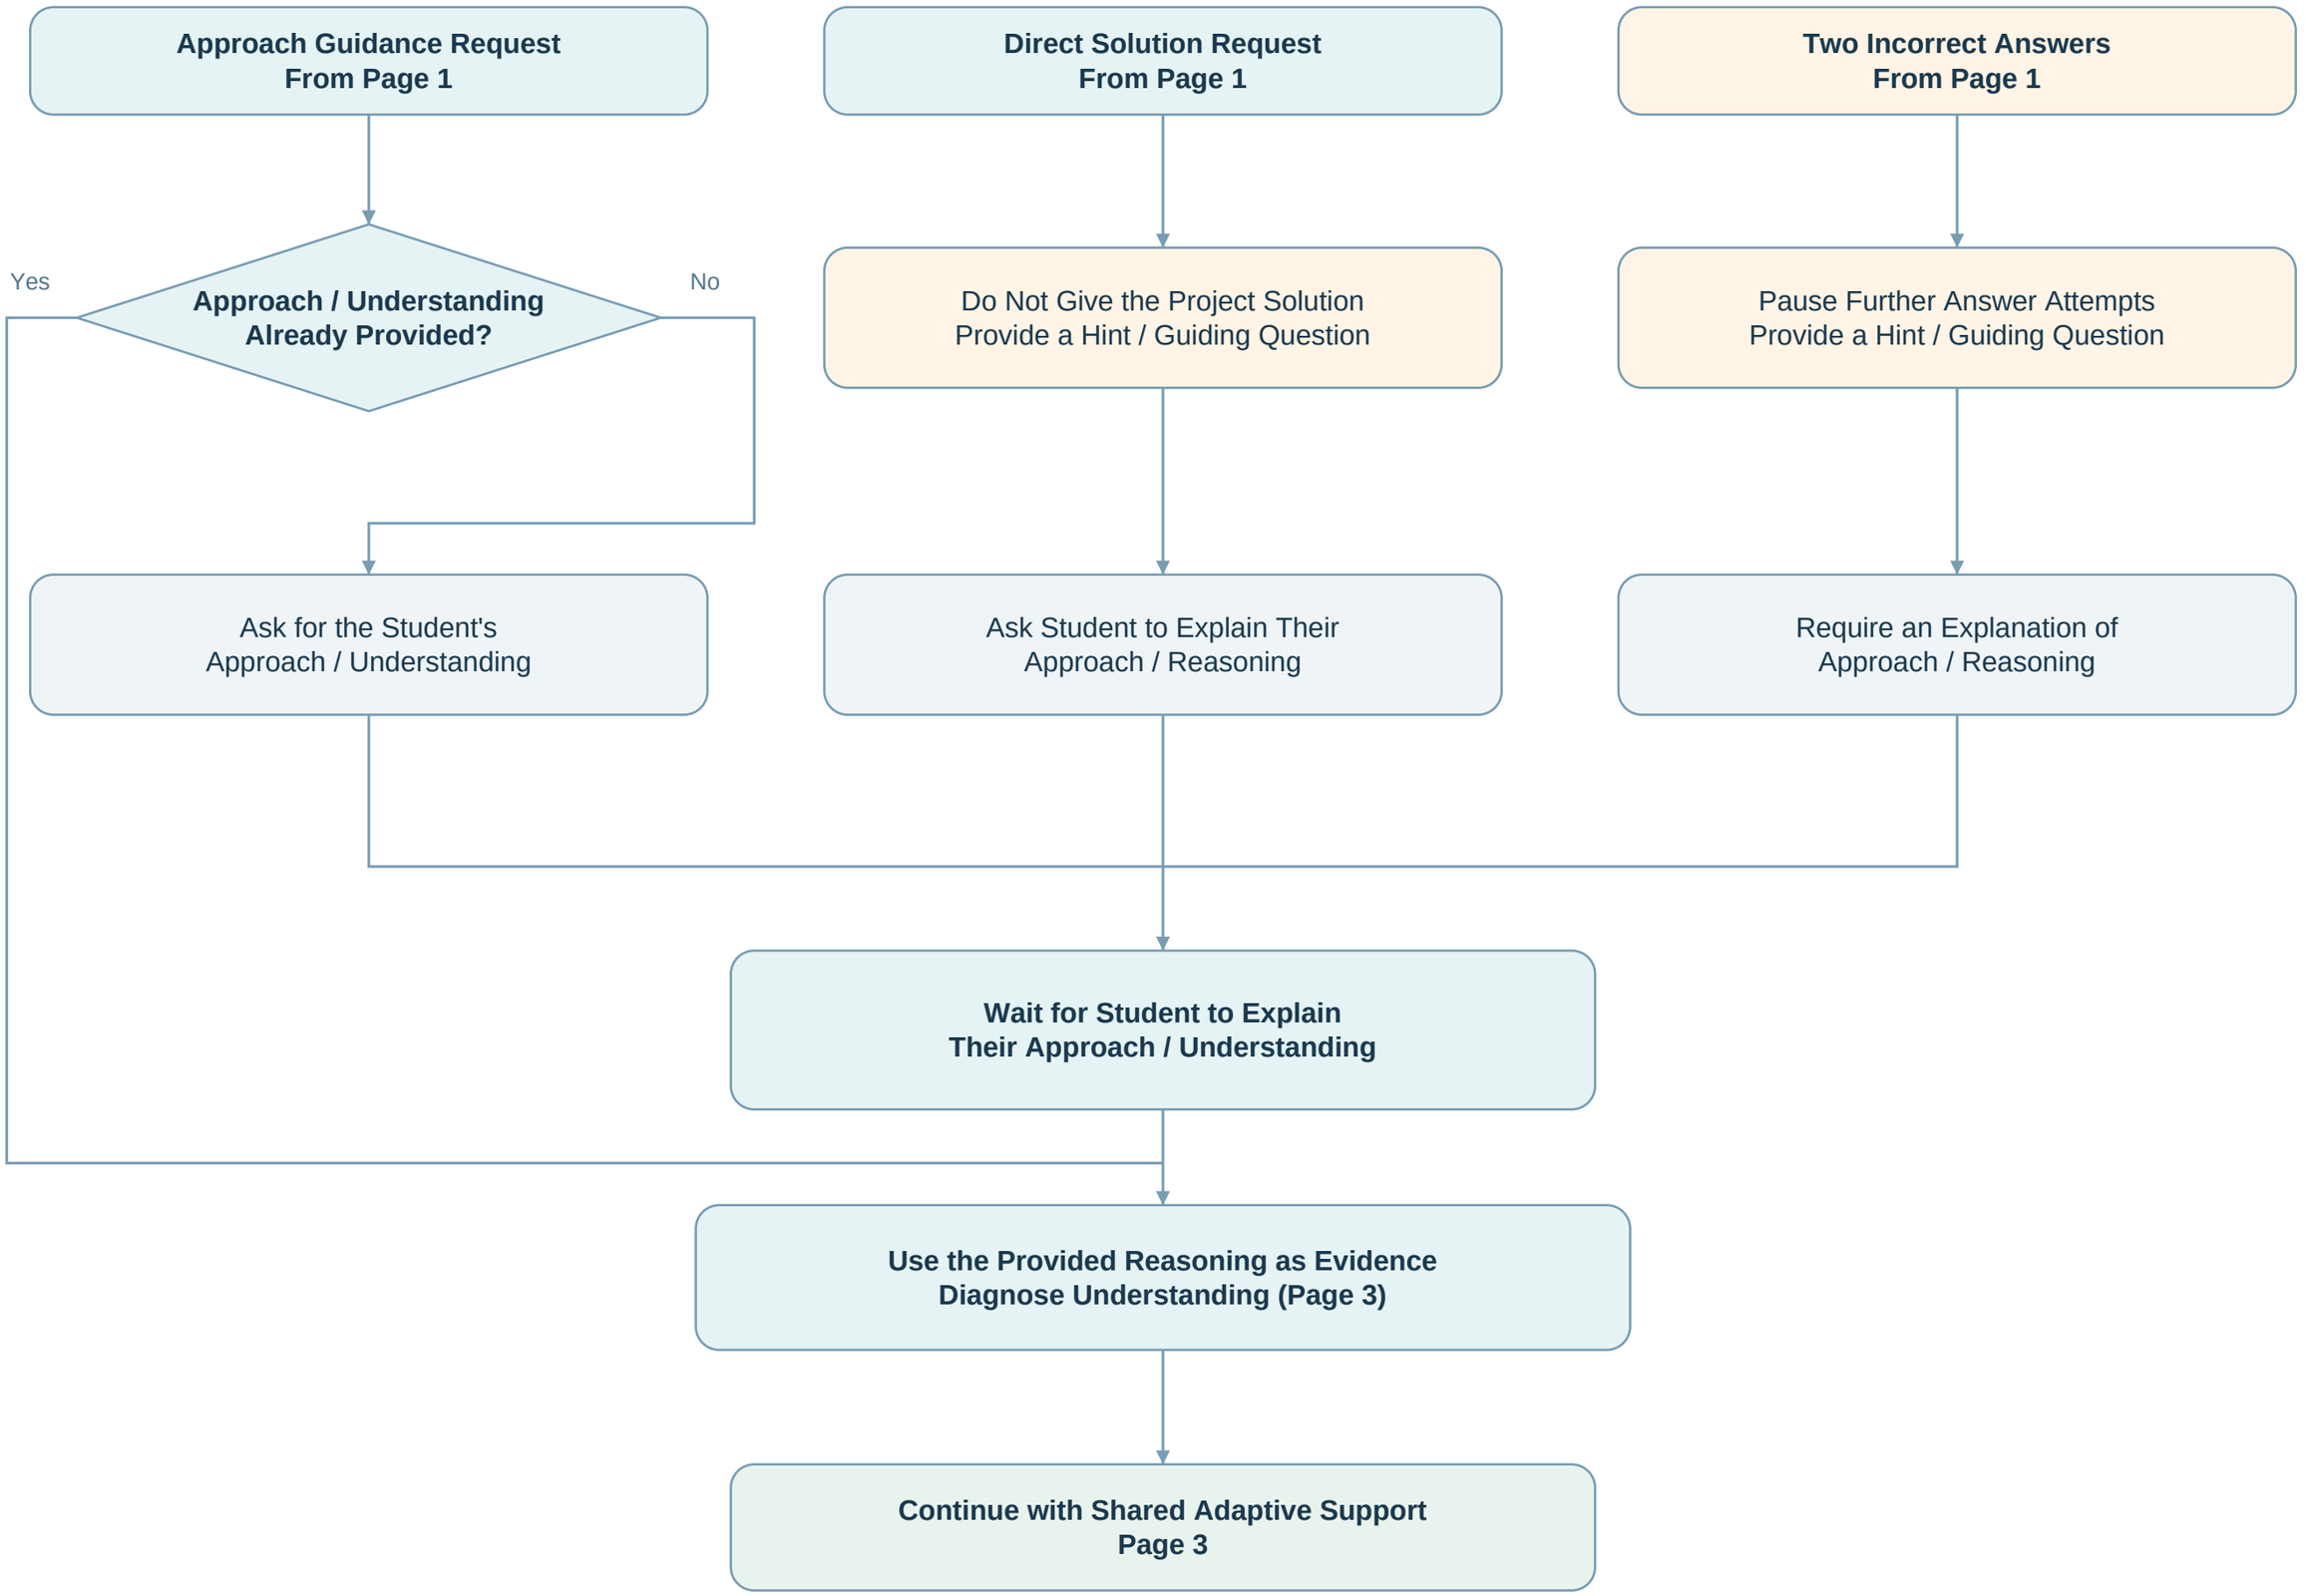
01 / PROJECT QUESTION INTAKE AND ANSWER CHECKING



A correct project answer advances the task. A conceptual detour preserves the current question and its answer-failure count. A new question starts with both counters at 0.

Pedagogical Policy

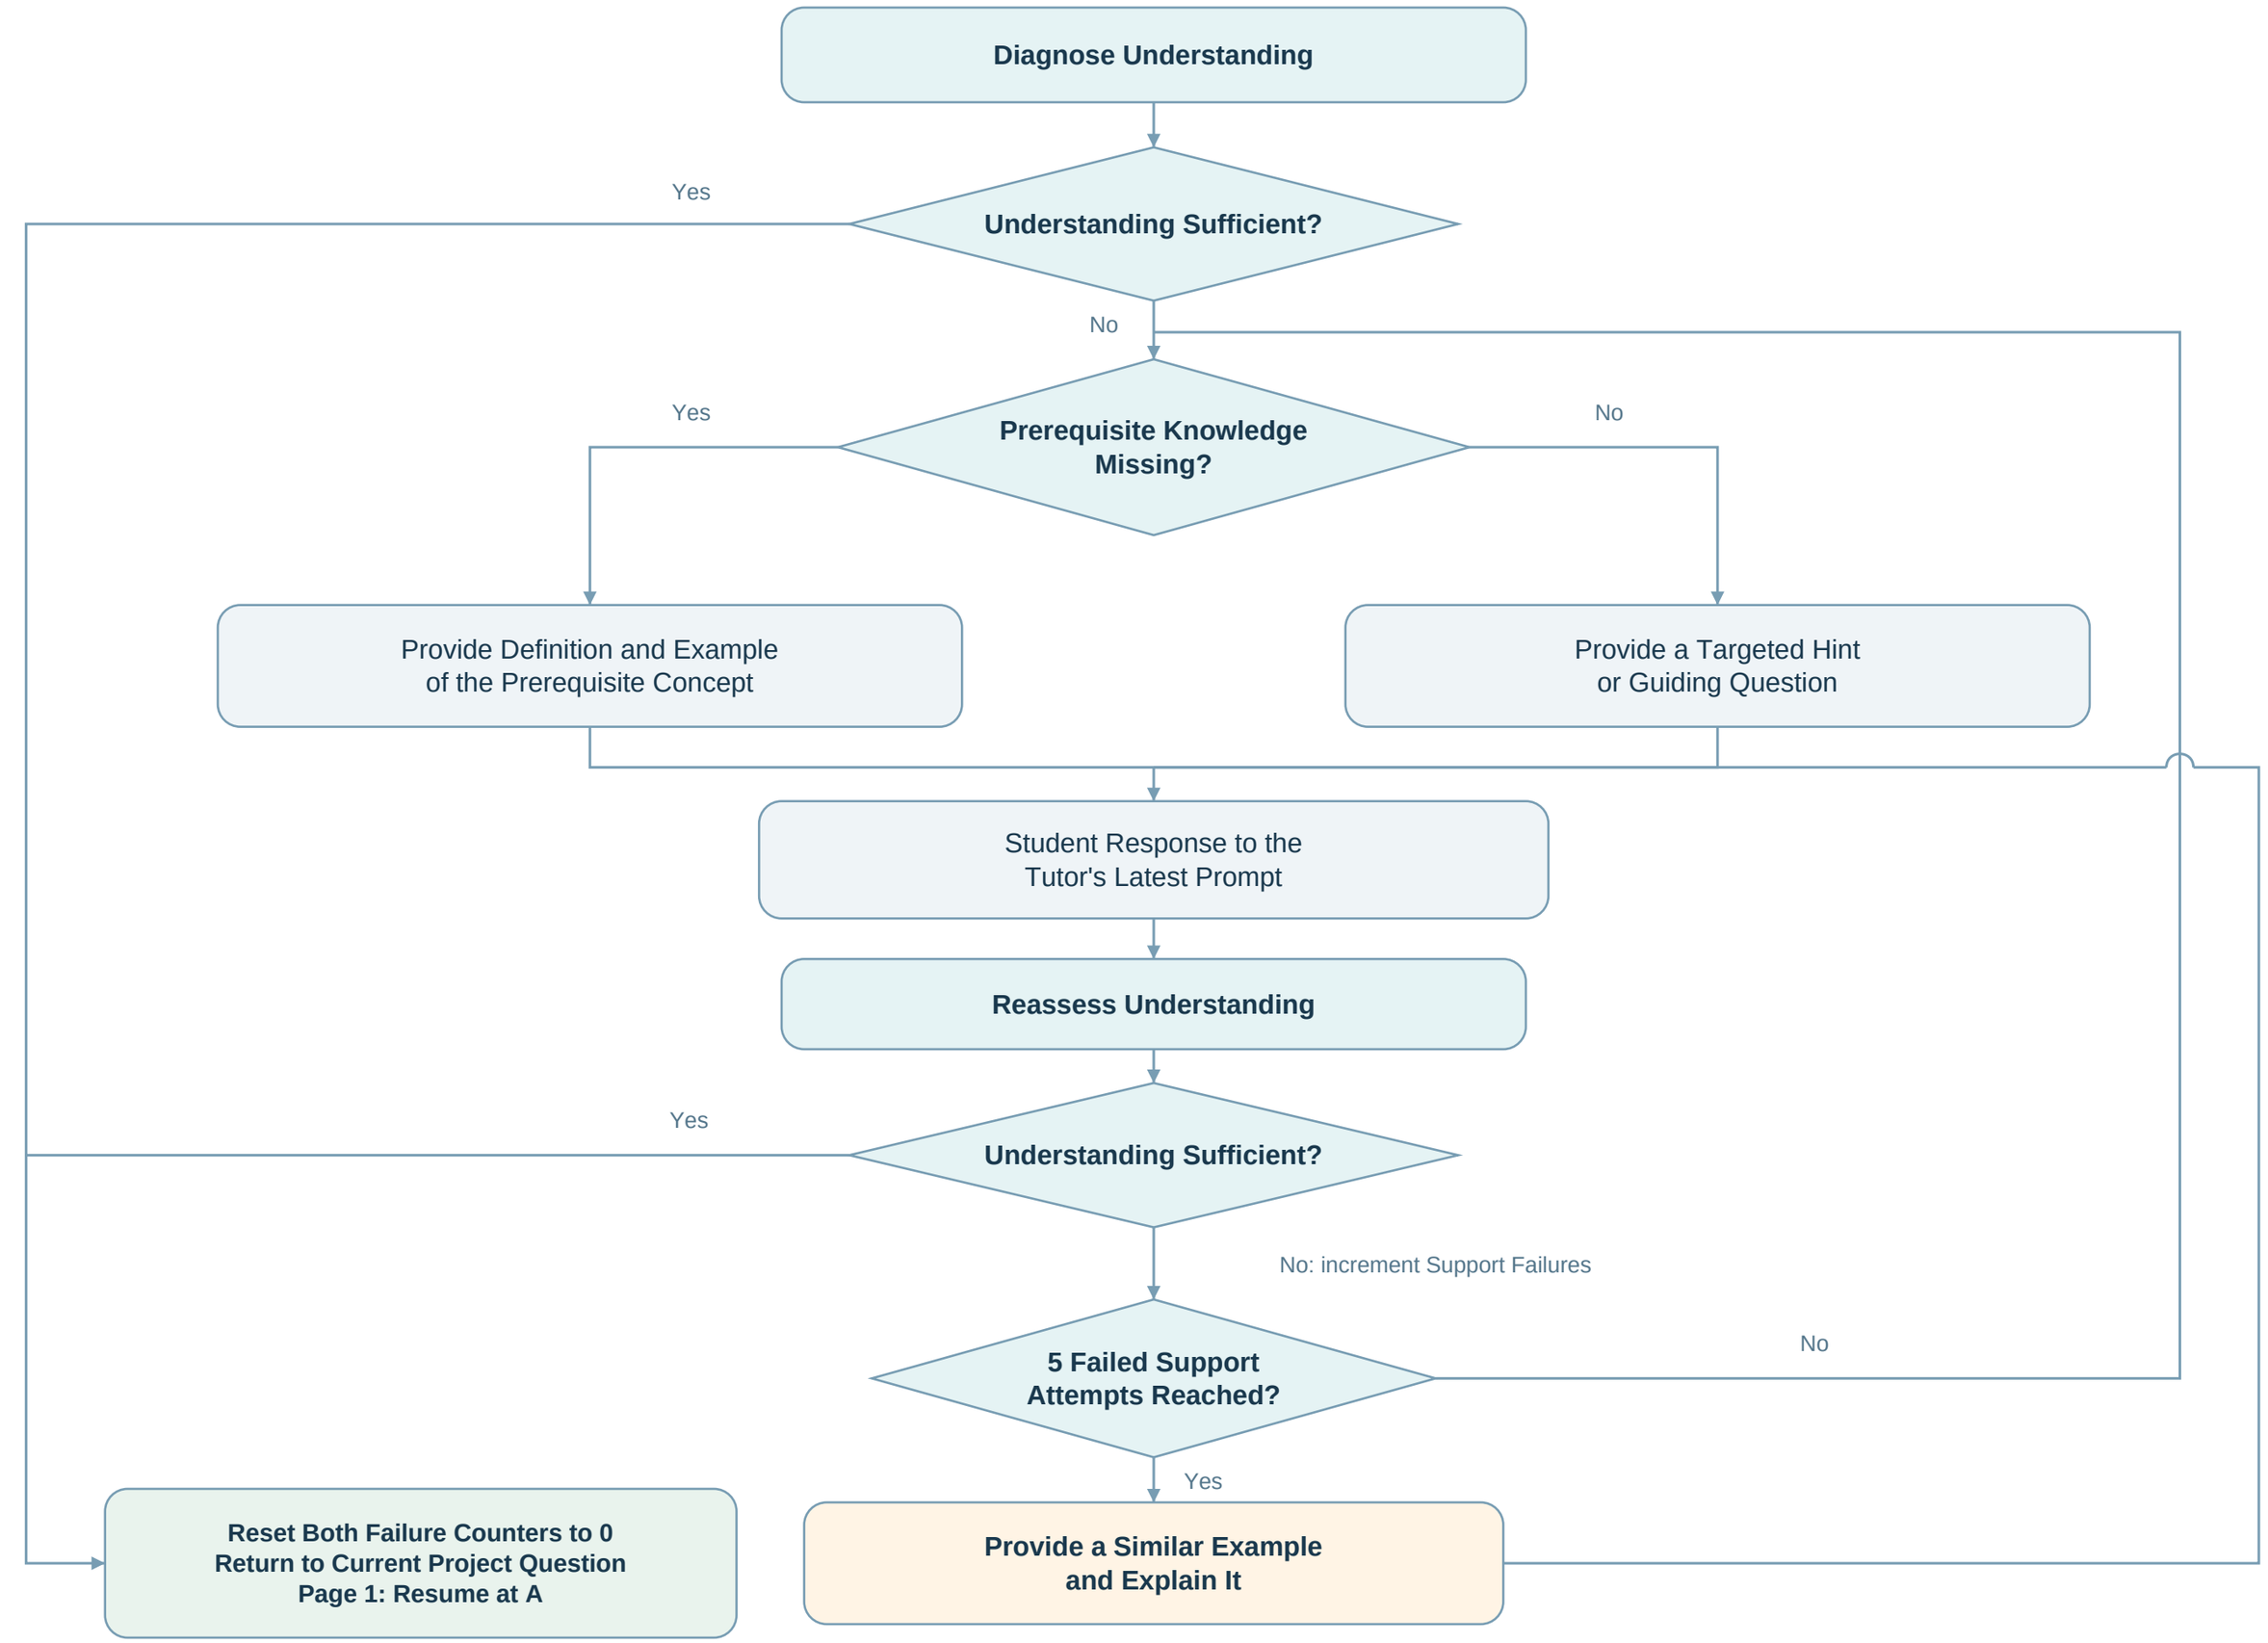
02 / HELP REQUESTS AND REASONING CAPTURE



Do not diagnose a prerequisite gap from a blank reply alone. During a support pause, collect an explanation or approach before allowing another project-answer submission. Start Support Failures at 0 for a new support episode.

Pedagogical Policy

03 / ADAPTIVE SUPPORT AND RETURN TO PROJECT QUESTION

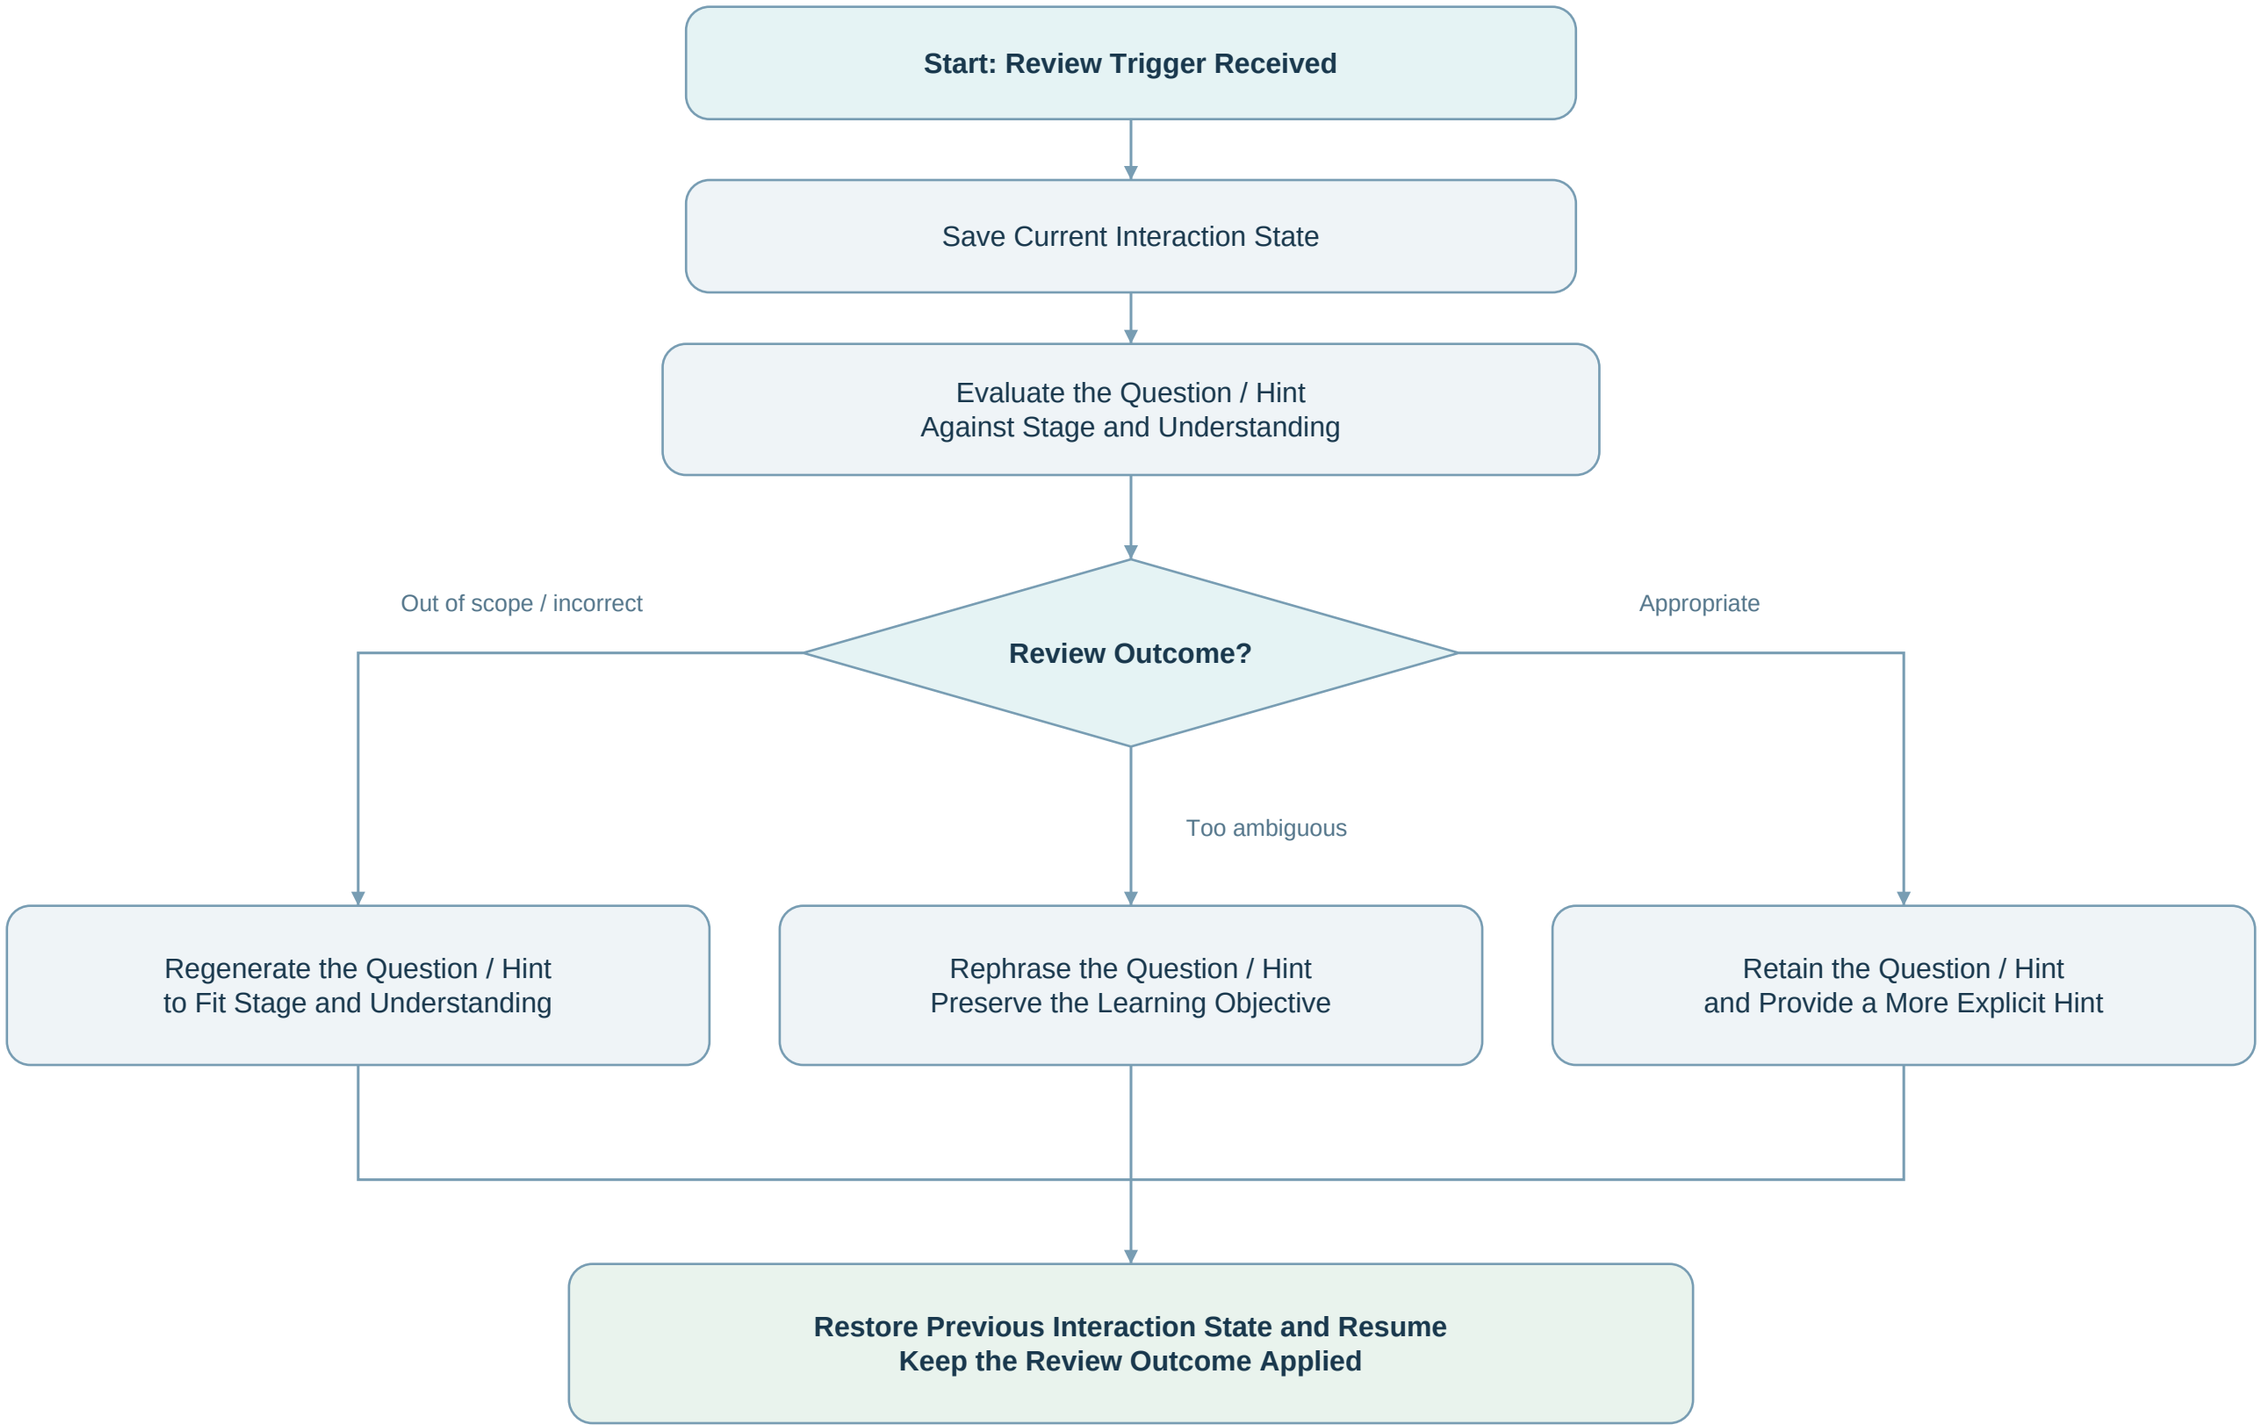


Answer Failures and Support Failures are separate counters. The project-question type is fixed here: use an explained similar example after five unsuccessful support responses. Question review can be requested at any tutor prompt (Page 4).

Pedagogical Policy

04 / QUESTION APPROPRIATENESS REVIEW

When a student explicitly requests review of a tutor-generated question or hint, save the current interaction state and evaluate whether the prompt fits the current DES project stage and demonstrated understanding.



Review does not count as an incorrect project answer or a failed support attempt. Resume the interrupted step with the review result applied; preserve the current question, both counters, and DES stage.
