Pedagogical Policy

01 / CONCEPTUAL QUESTION INTAKE

Scenario 1: Conceptual questions

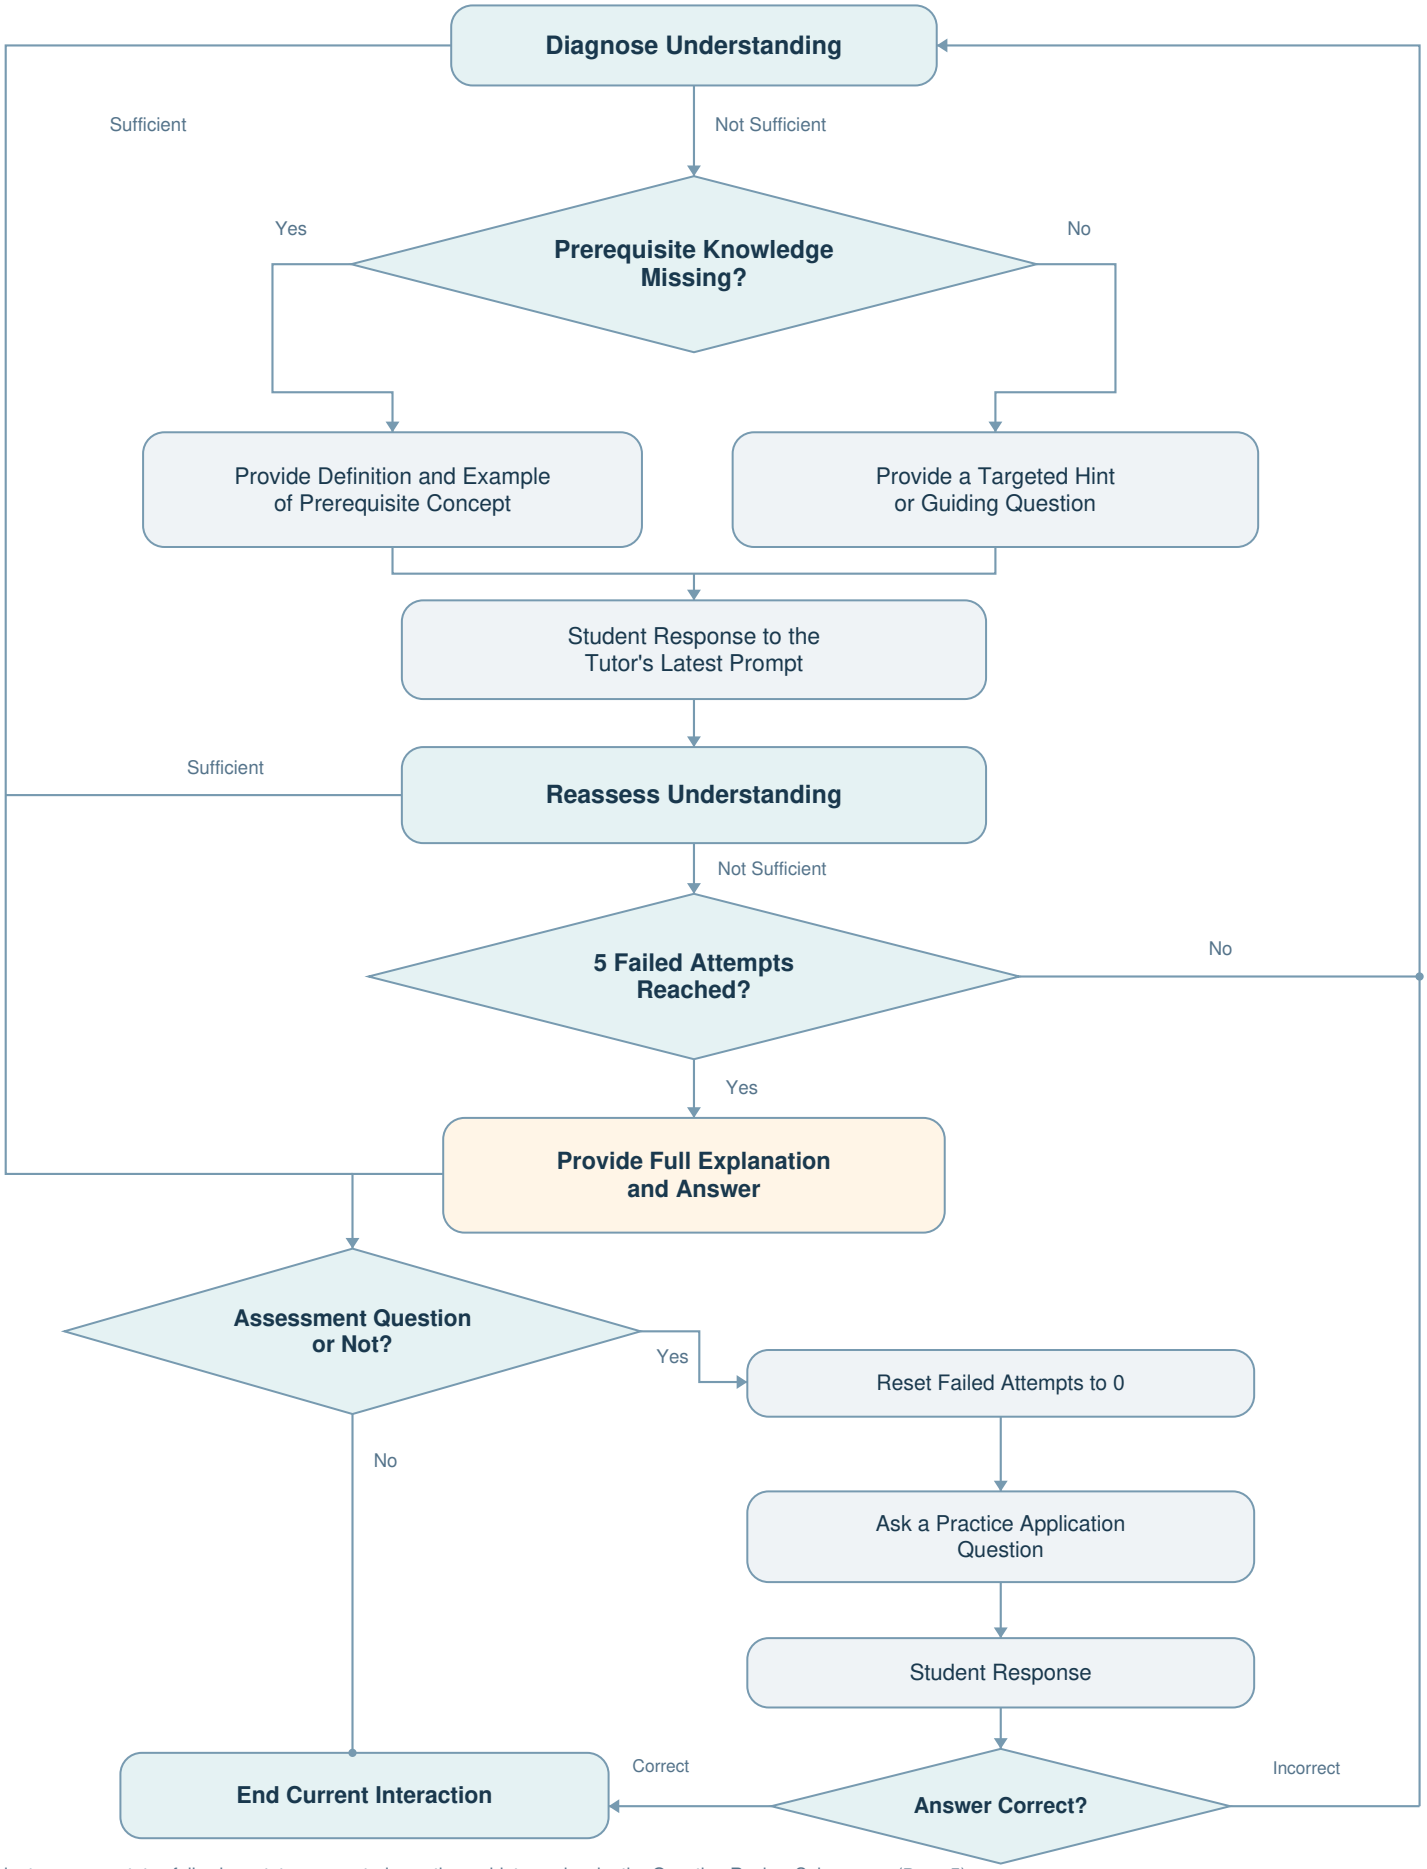

Student response states following a tutor-generated question or hint may invoke the Question Review Subprocess (Page 5).

Pedagogical Policy

02 / ADAPTIVE SUPPORT AND APPLICATION

Scenario 1: Conceptual questions

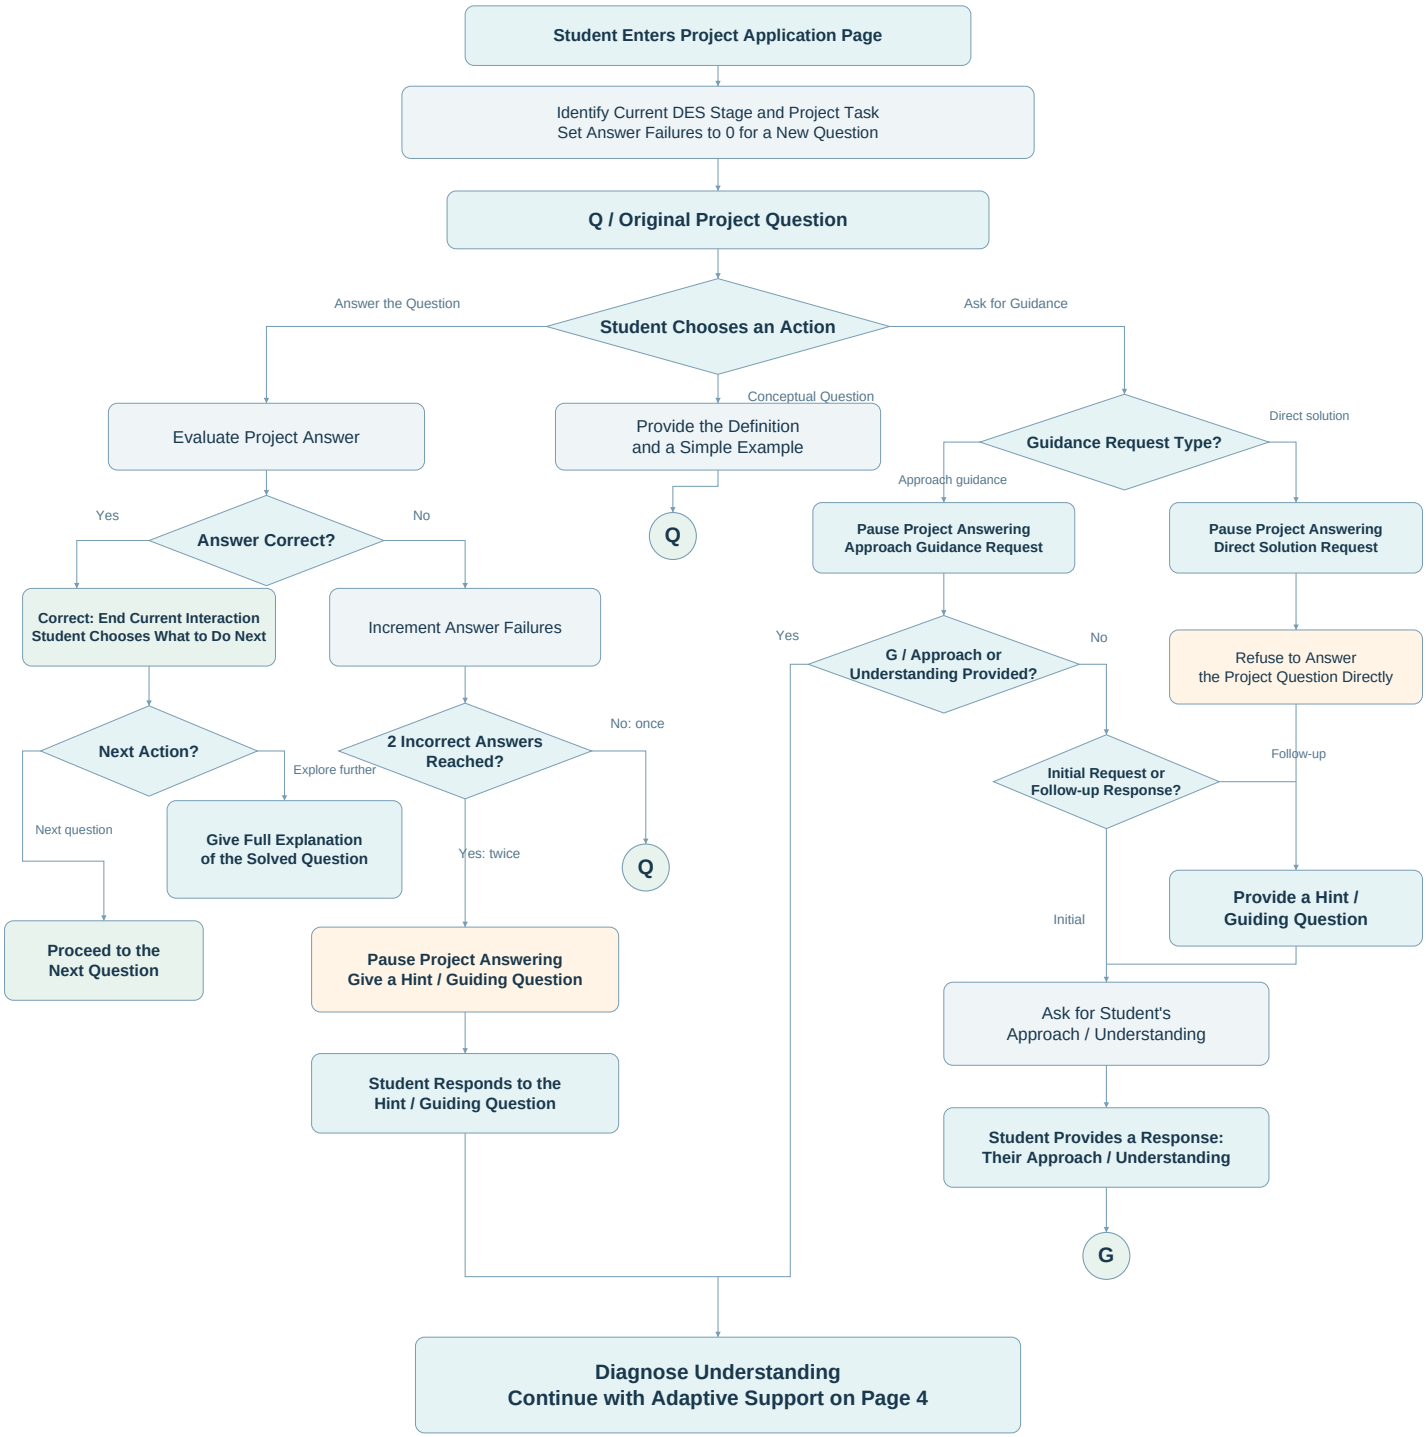

Student response states following a tutor-generated question or hint may invoke the Question Review Subprocess (Page 5).

Pedagogical Policy

01 / PROJECT APPLICATION QUESTION INTAKE

Scenario 2: Project application questions

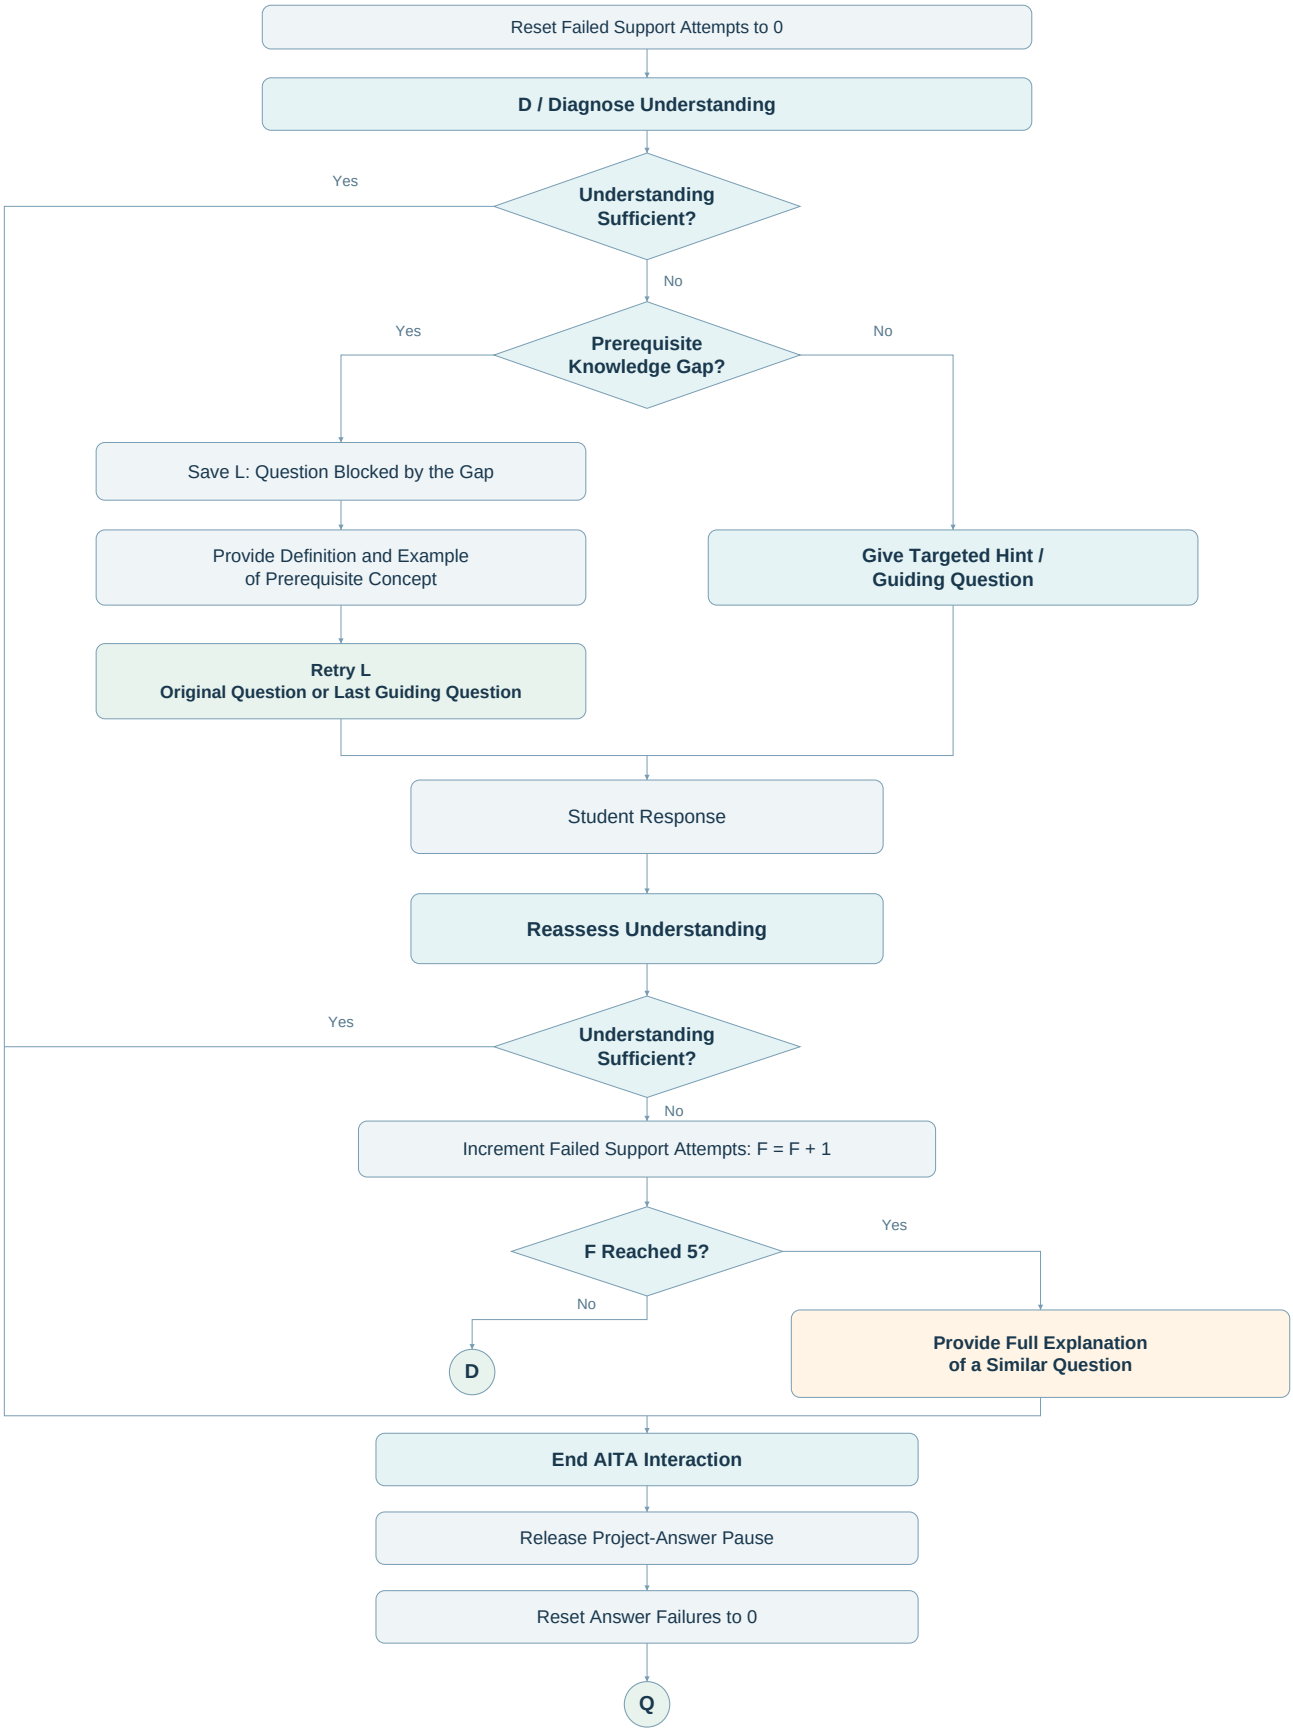

Q = original question. G = approach / understanding check. Returning to Q keeps the current question and answer-failure count.

New question: reset answer failures to 0. Guidance or two incorrect answers pauses project answering until the AITA interaction ends.

Pedagogical Policy

02 / ADAPTIVE SUPPORT AND APPLICATION

Scenario 2: Project application questions

F = failed support attempts: insufficient responses after support prompts. Reset to 0 only on first entry; retain F when returning to D. Initial diagnosis does not count.

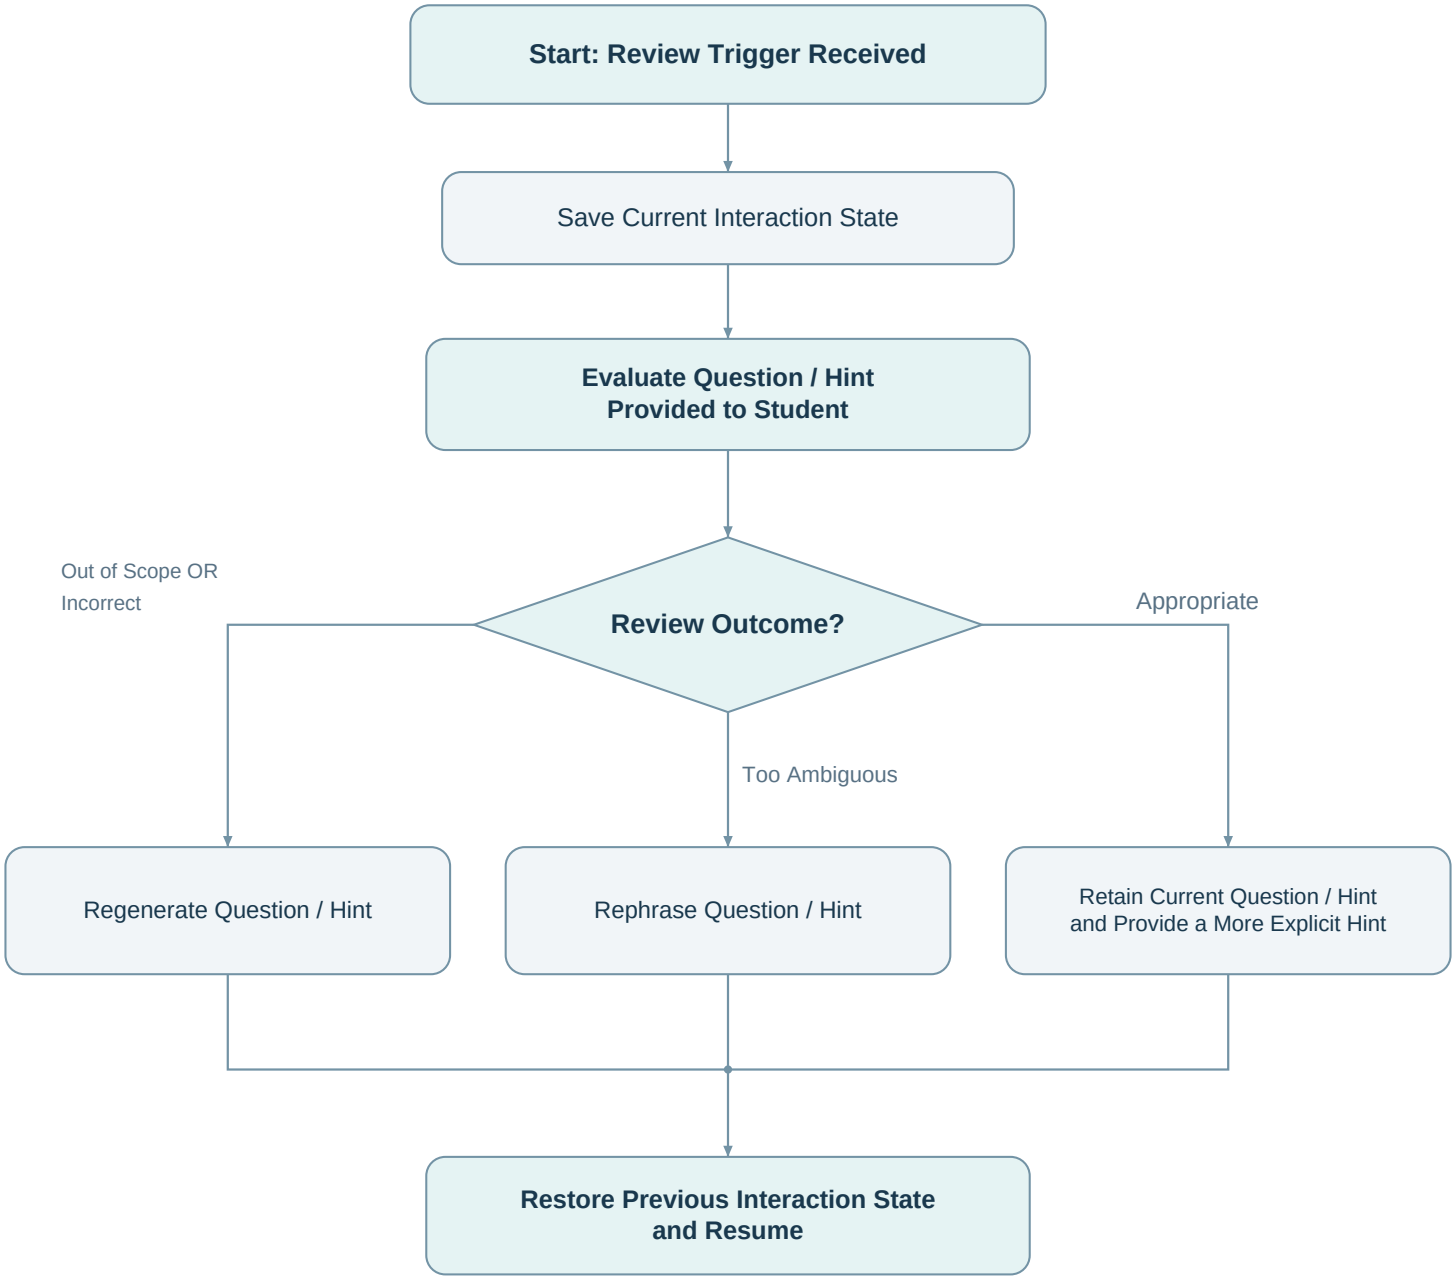

L = question blocked by the prerequisite gap (original or guiding). Retry L within support. End Support releases Q and resets answer failures to 0.

Pedagogical Policy

05 / QUESTION APPROPRIATENESS REVIEW

Shared subprocess: Review a question or hint in either scenario

This subprocess is triggered when a student explicitly requests a review of a tutor-generated question or hint. The system temporarily saves the current interaction state and evaluates whether the question or hint is appropriate for the student's current DES project stage and demonstrated understanding. Depending on the evaluation outcome, the system regenerates, rephrases, or retains the question or hint while providing additional guidance when appropriate. The previous interaction is then resumed without increasing the failed-attempt counter or advancing the learning stage.

Out of Scope or Incorrect Question / Hint: regenerate to fit the student's DES project stage and demonstrated understanding. Too Ambiguous: rephrase while preserving the learning objective. Appropriate: retain AND provide a more explicit hint; do not regenerate merely because review was requested. Resume with conversation context, diagnosed understanding, failed-attempt counter, and learning stage preserved. Keep the review outcome applied.
